

ABSTRACT

5 The present invention provides a positive  
photosensitive resin composition comprising (A) a positive  
photosensitive resin, (B) a photoacid generator and (C) a  
photosensitizer which is a benzopyran condensed ring  
compound capable of increasing photosensitivity to visible  
light with a wavelength of 480 nm or more;  
a positive photosensitive dry film prepared by applying  
10 the photosensitive resin composition to a surface of  
support film, followed by drying, to form a photosensitive  
resin layer; and  
a method of forming a pattern using the resin composition  
or the dry film.
